 available Monday-Friday 8:00 AM to 4:30 PM (Central Time)
 (English-speaking operators)

- 1** Attach four (B) Connectors onto the four corners of one (A) Wire Grid, using the slots on the rounded edge of the connectors.

**For maximum strength,
 be certain all connectors are fully seated.**

- 2** Form four walls using four more grids. Snap these grids into the perpendicular slots on the connectors.

- 3** Carefully snap four more connectors onto the newly formed corners of this cube as shown.

- 4** Turn the cube so the open end is the front of the cube. Snap two more connectors onto a new wire grid. Begin building the walls of the next cube by inserting the new grid into the existing open connectors.

- 5** Continue building cubes by inserting grids into open slots, then attaching at the open corners with more connectors.

- 7** Position the grid inside the cube. Snap the open ends of each plastic clip onto the inner wires of the cube walls.

- 6** If you decide to create a four cube set using the extra grids as shelves and dividers, then snap two C Plastic Clips onto two opposite ends of a grid, ensuring that the clips are near the corners.
